

## **Job Description: Lead .NET developer (5-8 yrs)**

### **1. Project Overview**

Join our engineering team developing digital manufacturing solutions for a leading Smart Meter manufacturing company. The project focuses on production traceability, quality management, manufacturing execution, real-time dashboards, shop-floor digitization, and enterprise application development. You will work closely with production, quality, IT, and business teams to build scalable applications that improve manufacturing efficiency, product traceability, and operational visibility.

---

### **2. Application Development**

- Develop enterprise web applications using C# and ASP.NET Core.
  - Design and develop RESTful APIs for manufacturing and production systems.
  - Build modules for production tracking, quality inspection, traceability, rework management, and operational dashboards.
  - Integrate applications with SQL Server, PostgreSQL, and ERP systems.
  - Application Deployment and run on cloud infrastructure.
  - Write clean, maintainable, and well-documented code following best practices.
  - Optimize application performance and troubleshoot production issues.
- 

### **3. Database Skills**

- Microsoft SQL Server
  - Database Design and Strong SQL programming skills
  - Stored Procedures, Functions, Views, Triggers, Joins
  - Code Review
  - Query & Code Optimization, Performance Tuning
- 

### **Preferred Skills**

- Experience in Manufacturing, MES, ERP, or Production Management applications.
- Knowledge of Shop Floor Automation and Production Traceability.
- Experience integrating enterprise applications with SAP or similar ERP systems.

- Familiarity with Git
- Understanding of Agile/Scrum methodologies (JIRA).

### **Soft Skills and Technical Leadership**

- Lead a team of 3–5 software developers.
- Design scalable and maintainable application architecture.
- Review code and ensure adherence to coding standards.
- Mentor junior developers and support technical decision-making.
- Coordinate with business analysts, QA, and client stakeholders
- Strong analytical and problem-solving abilities.
- Excellent communication and stakeholder management skills.
- Ability to work independently as well as lead a small team.
- Willingness to work closely with business users and production teams.
