PROFESSIONAL SUMMARY

Backend Software Engineer specializing in C#, ASP.NET Core, and Entity Framework, with additional 4+ years of back-end development experience in Java/Spring Boot. Skilled in microservices, REST APIs, async processing, and SQL optimization. Experienced in fintech and government-scale platforms.

PROFESSIONAL EXPERIENCE

Software Engineer

Dec 2024 – Present

Trigyn Technologies

- Developed scalable backend services using ASP.NET Core for the Bank Linkage platform under NRLM, enabling end-to-end SHG loan processing and bank integration workflows and using Spring Boot, REST APIs, and microservices, reducing downtime by 30%.
- Built asynchronous CSV report pipelines using RabbitMQ, ForkJoinPool, and CompletableFuture to process 50,000+ records 60% faster.
- Contributed to .NET-based backend services and integrations, complementing core Java and Spring Boot development.

Java Developer

Feb 2022 – Dec 2024

Compucom Software Limited

- Delivered backend enhancements using Java and Spring Boot, improving system throughput by 70% via performance tuning.
- Integrated Docker-based monitoring with Prometheus and Grafana to improve system observability.

PROJECTS

BANK LINKAGE

Centralized banking integration platform under NRLM for SHG loan processing, tracking, and reporting.

- Developed backend services using C#, ASP.NET Core, and Entity Framework for loan processing and bank integration workflows.
- Built ASP.NET Core Web APIs for loan submission, status tracking, and inter-bank verification with real-time sync between MIS and bank systems.
- Worked on consolidated reporting, RBAC implementation, and query optimization for large-scale datasets using Entity Framework.

SHG BANK LOAN

A digital lending platform for SHGs under NRLM enabling loan applications, tracking, and interest subvention processing.

- Developed backend services using Java and Spring Boot for SHG loan processing.
- Integrated PostgreSQL DBLink for centralized reporting and wrote JUnit tests achieving 70%+ coverage.

BWD – TOJ Program

- Developed secure REST APIs with JWT authentication and role-based authorization.
- Implemented PDF report generation using Spring Boot and Thymeleaf.
- Integrated email verification and notifications using SMTP with Google App Passwords.

HEXWAVE – AI-Powered Threat Detection System

- Built Authentication APIs for token generation, device alerting, and time-based reporting to enhance threat detection workflows.
- Designed and executed comprehensive JUnit test suites to maintain high code quality and reliability.
- Developed real-time monitoring dashboards in Grafana using Loki, with Prometheus-based Docker container metrics for observability.

EDUCATION

Btech, Computer Science Engineering

CIITM, Jaipur

2017 – 2021

Percentage : 70%

RBSE Board: XII

LBS Public School, Jaipur

2016 – 2017

Percentage : 76%

RBSE Board: X

AVM Public School, Jaipur

2014 – 2015

Percentage : 78%

TECHNICAL SKILLS

Programming Languages

C#, Java, C++, C

Frameworks

ASP.NET Core, Entity Framework, Spring Boot, Spring MVC, Spring Data JPA, Microservices, Thymeleaf

Databases

MySQL, PostgreSQL

Messaging & Async

RabbitMQ, CompletableFuture, ForkJoinPool

DevOps & Monitoring

Docker, Jenkins, Git, Prometheus, Grafana

Testing & Security

JUnit, JWT, Swagger, SonarQube
